Multi-source feedback (diving and hyperbaric medicine practice) - guidelines

Purpose

The essential competencies of a hyperbaric physician extend beyond medical knowledge and clinical expertise, to include competencies such as: communication and teamwork; advocacy and professionalism; teaching and learning. The purpose of the multi-source feedback (MsF) is to guide improvement by asking colleagues and co-workers to identify attributes that can be developed further and/or addressed if necessary.

This activity contributes to the completion of one practice evaluation activity directly relevant to the participant's own practice, equivalent to 20 credits. Completion of the activity requires a facilitator to collate data from the forms and provide feedback to the participant.

- [MsF confidentiality and CPD verification form](#)

PRIOR TO THE MsF PROCESS

1. A facilitator must be selected to assist with completing this activity. The facilitator can be a trusted colleague and ideally has some experience in providing feedback.

The facilitator is responsible for:

- Checking that colleagues and co-workers from whom the participant has asked for responses are representative of the participant's clinical practice.
- Following up on submission of MsF forms from identified responders.
- Collating results on the summary form.
- Destroying the original MsF forms after the summary form has been completed.
- Initiating the feedback meeting.
- Discussing the results in a formative way with the participant at a feedback meeting.

The facilitator should read through the guidance prepared by ANZCA regarding [feedback provision](#) to specialists that have completed practice evaluation activities for the purpose of CPD.

2. Ask the facilitator to sign the confidentiality section of the MsF confidentiality and CPD verification form.
3. The participant considers the colleagues or co-workers who will be asked to participate in the practice evaluation activity. Responders should be asked beforehand whether they would agree to take part in the MsF. The choice of responders should reflect the participant's clinical practice (for example, if they are responsible for supervising a trainee/s, a trainee should be represented among the responders).

It is recommended that feedback responses include other hyperbaric physicians, hyperbaric nurses/technicians and a hyperbaric trainee (if applicable). Other members of the team can also be approached, for example: administrative/ secretarial staff. The participant should check that the facilitator agrees with the chosen responders.

The MsF process

4. Distribute the MsF forms to those that have agreed to take part in the activity. It is suggested that 10 MsF forms be distributed. Responses from a minimum of six forms must be included on the summary form.
5. The participant completes the self-assessment form. Published data suggest that any discrepancy between a participant's own judgement of his/her performance and that of their colleagues is a useful discussion point for further reflection. Give the facilitator the completed self-assessment form and ask them to contact with you to organise a feedback meeting.
6. The facilitator follows up outstanding responses. A feedback meeting should be organised as soon as possible after:
 - A minimum of six to eight forms has been received, remaining responders have been followed up, and all forms to be included have been submitted.
 - The participant has completed the self-assessment form.
 - The responses have been collated on the MsF summary sheet by the facilitator.
 - The summary sheet has been provided to the participant and he/she has had an opportunity to review the results.

One of the strengths of this process is that responders provide feedback in a confidential manner. The facilitator must not show the participant the original MsF forms submitted, only the collated summary form.

7. The participant and the facilitator should meet for approximately 20-30 minutes to talk about the results of the survey. It is suggested that the participant be asked about any particular items on the MsF they may be concerned about and aspects of their practice they could improve upon.

The facilitator then talks through the summary results for each item, discussing any issues that may arise from the results. The participant should be complimented on areas they scored highly as well as identifying any areas for improvement. The facilitator should concentrate on specific areas that have a high variance between the participant's self-assessment (should be indicated in grey on the form) and colleagues' feedback. Then focus on specific items of behaviour.

The facilitator may ask the participant to consider why they may have received negative results (if any) and discuss examples of how they approach those aspects of practice. They should also help to prompt the participant to consider how they could improve the results (if needed) and possibilities for professional development.

8. The participant asks the facilitator to sign the verification section of the MsF confidentiality and verification form.

Recording this CPD activity

Completion of this activity can be recorded on the CPD portfolio system.

Participants will be asked to provide the following information:

- Number of MsF forms collected.
- Start and end date along with total hours.
- Name and contact details of the facilitator.
- A completed CPD verification form.
- A copy of the MsF form used and a completed MsF confidentiality form (is optional).

If a participant is selected to be involved in the random audit of CPD activities, the participant must provide evidence of the MsF process. A copy of the MsF form and the MsF confidentiality form is acceptable. These forms can then be uploaded to the CPD portfolio system. The college may contact the facilitator to verify the activity took place.
